## Engine Options

Volvo Penta's D4-300 & D6-370 engines are developed from the latest design in modern diesel technology.

These engines have a common rail fuel injection system, double overhead camshafts, 4 valves per cylinder, turbocharger and aftercooler.

Together with a large swept volume and the EVC system (Electronic Vessel Control), this results in world-class diesel performance, combined with low emissions. The engines are extremely compact for the high outputs.

Various Trailer Options Available

*Twin & Triple Axle-Twin Braked*
